

OYSTER PERPETUAL
GMT-MASTER II

ROLEX

WEARING THE WATCH FOR THE FIRST TIME

Before being worn for the first time, or if it has stopped, a Rolex watch must be wound manually in order to function correctly and precisely.

To wind the watch manually, unscrew the winding crown completely, then turn it several times clockwise. (Turning in the other direction has no effect.) A minimum of 25 turns is required for adequate partial winding. The watch will then be wound automatically as long as it is worn on the wrist. Carefully screw the crown back down against the case to ensure waterproofness.

The green seal accompanying your Rolex watch is a symbol of its status as a Superlative Chronometer. This exclusive designation attests that it has successfully undergone a series of specific final controls by Rolex in its own laboratories in addition to the official COSC certification of its movement. This unique testing of its chronometric precision, waterproofness, self-winding and reliability pushes back the boundaries of performance and makes Rolex a benchmark for excellence in mechanical watches. SUPERLATIVE CHRONOMETER
OFFICIALLY CERTIFIED

OYSTER PERPETUAL GMT-MASTER II

Precise, reliable and functional, the Oyster Perpetual GMT-Master II was designed to allow the time in two different time zones to be read simultaneously: either the local time and reference time, or the local time and the time in an alternative time zone. It features a 24-hour hand and a bidirectional rotatable bezel with a 24-hour graduated bezel insert. Its 40 mm case, waterproof to a depth of 100 metres (330 feet) is a paragon of robustness. Its dial offers exceptional legibility thanks to the Chromalight hour markers and hands coated with a luminescent material emitting a long-lasting blue glow when in darkness. Its Triplock winding crown,

with a triple waterproofness system, is protected by a crown guard that is an integral part of the middle case. The sapphire crystal, with a Cyclops lens at 3 o'clock, is virtually scratchproof and benefits from an anti-reflective coating.

The Oyster Perpetual GMT-Master II is equipped with a self-winding mechanical movement entirely manufactured by Rolex.

The Oyster Perpetual GMT-Master II features an Oyster or Jubilee bracelet with an Oysterlock safety clasp and the Easylink comfort extension link.

SIMULTANEOUS DUAL TIME ZONE AND ALTERNATIVE TIME ZONE

The Oyster Perpetual GMT-Master II allows travellers to simultaneously read their local time and reference time (home time, for example). The former is indicated by the conventional hour, minute and seconds hands. The latter is indicated by the triangle-tipped 24-hour hand read against the graduations on the bezel when it is in the neutral position (triangle at 12 o'clock).

Local time can be adjusted quickly by jumps of the hour hand without affecting either the 24-hour hand or the minute hand. The date change is linked to the

local time. Thus, the date shown in the window always corresponds to that of the local time.

Turning the bidirectional bezel of the GMT-Master II allows the time in an alternative time zone to be displayed (see p. 18). In this case, the reference time is no longer shown.

OVERVIEW

- 1 Hour hand
- 2 Minute hand
- 3 Seconds hand
- 4 24-hour hand
- 5 Date window
- 6 Bidirectional rotatable bezel with 24-hour graduated Cerachrom insert in ceramic
- 7 Triplock winding crown with triple waterproofness system

*Version of the GMT-Master II
with the crown on the left*

SETTING THE WATCH

These instructions also apply to the version of the GMT-Master II with the crown on the left.

Screwed-down position (*position 0*)

The crown is completely screwed down against the case. When the crown is in this position, the Oyster Perpetual GMT-Master II is guaranteed waterproof to a depth of 100 metres (330 feet).

Manual winding (*position 1*)

The crown is unscrewed. To wind the watch manually, turn the crown clockwise. (Turning in the other direction has no effect.) When setting the watch for the first time or after the watch has stopped, complete a minimum of 25 turns for partial winding.

Version with the
crown on the left

After every use, carefully screw the crown back down against the case to guarantee the waterproofness. Return the crown to *position 1* and apply light pressure on it while screwing it down clockwise against the case. The crown should never be unscrewed underwater.

COMPLETE SETTING OF THE WATCH IS CARRIED OUT IN TWO STEPS IN THE ORDER GIVEN BELOW

1. Setting the reference time (crown in position 3)

To set the reference time, follow the steps in the order given:

- Unscrew the crown and then pull it out to the second notch. The seconds hand is stopped, allowing you to set the time to the precise second.
- Put the bezel in the neutral position (triangle on the bezel aligned with the 12 o'clock marker on the dial).

- Set the reference time using the 24-hour hand (against the graduations on the bezel) and the minute hand (against the graduations on the dial) by turning the crown in either direction.

Setting the reference time also moves the conventional hour hand (local time). For this reason, the reference time must be set before setting the local time.

Go to step 2 ➔

*Version with the
crown on the left*

Unscrew and then pull out

After every use, carefully screw the crown back down against the case to guarantee the waterproofness. Return the crown to *position 1* and apply light pressure on it while screwing it down clockwise against the case. The crown should never be unscrewed underwater.

* Reference time, Geneva, 10.10 am

2. Setting the date and the local time (crown in position 2)

To set the date and the local time, follow the steps in the order given:

- Pull the crown out to the first notch.
- Set the date by turning the crown in either direction. The hour hand moves in increments of one hour. The date changes when the hour hand passes midnight, in either direction, after two complete turns around the dial.

- Set the local time by turning the crown in either direction. The hour hand moves in increments of one hour. Be aware of the difference between noon and midnight (the date changes as the hour hand passes midnight).
- Push in and then screw down the crown.

The local time is identical to the reference time (24-hour hand) if the wearer is currently located in his reference zone. It can be easily adjusted when travelling.

*Version with the
crown on the left*

Push in and then screw down

After every use, carefully screw the crown back down against the case to guarantee the waterproofness. Return the crown to *position 1* and apply light pressure on it while screwing it down clockwise against the case. The crown should never be unscrewed underwater.

* Reference time, Geneva, 10.10 am

* Local time, Geneva, 10.10 am

ADJUSTING THE LOCAL TIME (crown in position 2)

When travelling, to adjust local time only (without affecting the 24-hour reference time display), follow the steps in the order given:

- Unscrew the crown and then pull it out to the first notch.
- Set the local time by turning the crown in either direction. The hour hand moves in increments of one hour. The date is linked to local time and changes automatically when the hour hand passes midnight.

– Push in and then screw down the crown.

The 24-hour hand indicates the time in the reference time zone and allows the wearer to distinguish daytime hours from night-time hours.

Version with the
crown on the left

Unscrew and then pull out

After every use, carefully screw the crown back down against the case to guarantee the waterproofness. Return the crown to *position 1* and apply light pressure on it while screwing it down clockwise against the case. The crown should never be unscrewed underwater.

* Reference time, Geneva, 10.10 am

* Local time, New York, 4.10 am

DISPLAYING AN ALTERNATIVE TIME ZONE (setting via the bezel only)

An alternative time zone can be displayed by using the rotatable bezel and the 24-hour hand (which usually displays the reference time).

To display the alternative time zone, place the bezel in the neutral position (triangle at 12 o'clock). Then calculate the number of hours' difference between the reference time and the time in the desired time zone. If that time zone is ahead (east of the reference time), turn the bezel counterclockwise the same number of hours. If the desired time zone is behind (west of the reference time), turn the bezel clockwise the same number of hours. The 24-hour hand read

against the bezel indicates the time in the alternative time zone. The minutes are shown on the dial by the centre minute hand.

Example

To show Tokyo time (+8 hr compared to Geneva reference time), turn the bezel 8 notches counterclockwise.

To return to the reference time display, turn the bezel in either direction to place the triangle on the bezel opposite the 12 o'clock marker on the dial (neutral position).

* Local time, New York, 4.10 am

* Time in the alternative time zone, Tokyo, 6.10 pm

EASYLINK COMFORT EXTENSION LINK*

To ensure optimal comfort when wearing your watch, Rolex created the Easylink comfort extension link. Its exclusive design comprises a link that is pulled out or folded back on itself to adjust the length of the bracelet by approximately 5 mm, without the need for tools.

*available on Oyster and Jubilee bracelets

Adjusting from the short position to the long position

Adjusting from the long position to the short position

CARING FOR YOUR ROLEX

Thanks to Rolex expertise, your watch will require very little day-to-day care.

You can help preserve its lustre by cleaning it occasionally with a microfibre cloth. You can also wash the case and bracelet from time to time using soapy water and a soft brush. After wearing your watch in the sea, it is important to rinse it with fresh water to remove any salt and sand deposits.

Before cleaning your watch, always ensure that the crown is screwed down properly against the case to guarantee waterproofness.

AFTER-SALES SERVICE

Rolex watch servicing ensures that your timepiece will continue to perform optimally and meet Rolex's stringent requirements in terms of precision, reliability and waterproofness throughout its life.

The timekeeping accuracy of your watch is largely dependent on high-performance lubricants specially developed by Rolex to minimize friction and prevent wear of components. To guarantee continued accuracy and waterproofness, Rolex recommends that you periodically return your watch to an Official Rolex Retailer or

Service Centre for professional servicing, which will always be carried out by a Rolex-approved watchmaker.

During a complete service, the watch is dismantled and all of its components – the case, bracelet and movement – are closely examined.

The movement is entirely disassembled and all the parts are carefully inspected. Those that no longer meet Rolex requirements are systematically replaced by new components. The movement is lubricated on reassembly. The case

and bracelet are re-polished or satin-finished according to their original finish, restoring their shine and lustre while removing any marks or scratches.

At the end of the process, your Rolex watch undergoes a series of tests to verify its functions, waterproofness and power reserve, as well as the precision of its movement.

After a complete Rolex service, your watch is covered by a service guarantee.

WORLDWIDE SERVICE NETWORK

The network of Official Rolex Retailers and Service Centres covers more than 100 countries around the world and draws on the expertise of highly skilled watchmakers, carefully selected and trained by Rolex.

For a list of Official Rolex Retailers and Service Centres, please visit rolex.com.

Official Rolex Retailers can advise you on all the technical aspects of your watch's functions. Whether your bracelet needs sizing or it is time for a complete service, highly qualified Rolex watchmakers are on hand worldwide to meet all of your service needs.
